ALUMINUM DECK SYSTEM

HA'GALIL PROFILES LTD.

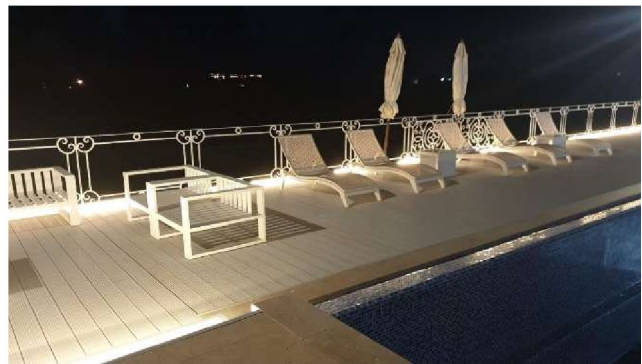

Advanced Aluminum Systems *3275

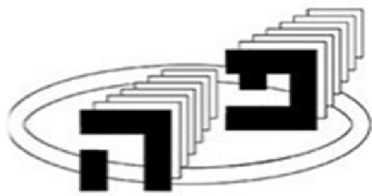

Do You Know?

An aluminum deck warms up just like everything in the Israeli climate, yet surprisingly - it does not warm up as much as wood. The wood's structure stores the heat, while the flat structure of the aluminum profile radiates the heat off.

If you wish to save time and money and avoid the routine maintenance - aluminum deck platforms are the perfect solution for you.

An aluminum deck is made of 6 meters long aluminum profiles, does not require maintenance, resists any type of weather throughout its usage life, may be painted in any color, including wood colors and if you move to another house, you can even disassemble and recycle it.

Installation Instructions

1. Fix a wooden infrastructure to the ground. Maintain a 35 cm distance between the wooden beams.
2. Install a rubber sheet over the wooden infrastructure.
3. Locate an aluminum deck spacer using a self-drilling screw.
4. Attach the aluminum deck profiles to the substrate.

Deck Installation Detail

Technical Data

Profile No.	Description	Sketch	Weight g/m
563052	Spacer for Deck		0.204
563033	Aluminum Deck		1.056
